

OSP REAL HOMES - Extend height size of Map Search module

As we know, the Map search module has 3 height size modes.

1. Normal mode: 400 pixel
2. Higher mode: 600 pixel
3. Full screen

Based on those modes, we can extend the height size of Map search module to make it in Higher mode as default (600px). To implement this solution, please follow these steps

1. Open file: modules > mod_osmapsearch > asset > css > style.css

Find

```
divmapsearch{  
    width:100%;  
    height:400px;  
    position:relative;  
    overflow:hidden;  
}
```

and change to

```
.divmapsearch{  
    width:100%;  
    height:600px;
```

```
position:relative;
overflow:hidden;
}
```

2. Open file: root > templates > osprealhomes > html > mod_osmapsearch > default.php

Find

```
<span id="openmap" class="hidden-xs">
    <i class="fa fa-angle-down"></i> <?php echo Jtext::_('OS_OPEN_MAP'); ?>
</span>
```

and replace by:

```
<span id="openmap" class="hidden-xs">
    <i class="fa fa-angle-up"></i> <?php echo Jtext::_('OS_CLOSE_MAP'); ?>
</span>
```
